

Intel® Distribution for Python* 2024 Gold Release

Release Notes

17 November 2023

Version History/Revision History

Date	Revision	Description
17 November 2023	1.0	Release Notes for the Intel® Distribution for Python* 2024 Gold Release

Intended Audience

The target audience for the release notes are software developers and end users of the Intel® Distribution for Python* 2024 Gold release.

Customer Support

For technical support, including answers to questions not addressed in this document, visit the technical support forum at <https://software.intel.com/en-us/forums/intel-distribution-for-python> or email Intel Corporation at scripting@intel.com.

1 Introduction

The Python* programming language is an open-source programming language with increasing adoption by developers across many application domains and a large ecosystem of available free packages. In particular, the packages commonly used for numerical and scientific computation, called the [SciPy](#) stack, are very popular and heavily used.

Intel® Distribution for Python* is a binary distribution of Python interpreter and commonly used packages for computation and data intensive domains, such as scientific and engineering computing, big data, and data science. The product supports Python 3.9 for Windows and Linux. The product simplifies Python installation by providing packages in a binary form so that everything is pre-configured and no compilation tools are needed, as well as contains all the dependences for running on popular OS platforms. Python packages have been accelerated with Intel® Performance Libraries, including [Intel® Math Kernel Library \(Intel® oneMKL\)](#), [Intel® Threading Building Blocks \(Intel® oneTBB\)](#), [Intel® Integrated Performance Primitives \(Intel® IPP\)](#), and [Intel® Data Analytics Acceleration Library \(Intel® oneDAL\)](#). The packages have been optimized to take advantage of parallelism through the use of vectorization, multi-threading and multi-processing, as well as through the use of optimized communication across multiple nodes.

This document provides system requirements, installation instructions, and lists issues and limitations.

To learn more about this product, see:

- New features in the [New in this Release](#) section below, or in the product help.
- Reference documentation in the [Related Documentation](#) section below
- Installation instructions in the [Installing this Release](#) section below

2 New in this Release

2.1 Intel® Distribution for Python 2024 Gold Release

The following are new features for the release:

- Installer is now based on Conda Constructor, which improves user installation experience by
 - Faster conda package installation and error-handling
 - Compatibility with .conda files
 - Customizable install paths
 - Command-line interface installation

Other changes in this release:

- Performance improvements and other enhancements for Data Parallel Extensions for Python (dpctl, dpnp, numba-dpex)
- macOS no longer supported for 2024.0

The full list of provided packages is in [Release Content](#).

3 System Requirements

The Intel® Distribution for Python* supports the Intel® 64 architecture. For a complete explanation of this architecture name please read the following article:

[Intel® Architecture Platform Terminology for Development Tools](#).

The lists below pertain only to the system requirements necessary to support application development with Intel® Distribution for Python*. If you are using Cython*, please review the documentation for your compiler (GCC*, Microsoft Visual Studio*, or Intel® Compiler) to determine the minimum hardware and software requirements.

Minimum System Requirements

- A system based on an Intel® 64 architecture processor supporting the Intel® Streaming SIMD Extensions 4.2 (Intel® SSE4.2) instructions (or compatible non-Intel® processor).

NOTE:

- Incompatible or proprietary instructions in non-Intel® processors may cause the analysis capabilities of this product to function incorrectly. Any attempt to analyze code not supported by Intel® processors may lead to failures in this product.
- For the best experience, a multi-core or multiprocessor system is recommended.
- About 4GB free disk space for all product features and all architectures

Note: Intel® Distribution for Python* is expected to work on many more Linux distributions as well. Let us know if you have trouble with the distribution you use.

Hardware Requirements

- GPU:
 - 6th Gen Intel® Core™ processor or higher
 - Intel® Iris® Plus Graphics
 - Intel® Iris® Xe Graphics
 - Intel® Iris® Xe Max Graphics
 - Intel® Iris® Graphics
 - Intel® Iris® Pro Graphics
- CPU:

- Intel Atom® Processors
- Intel® Core™ Processor Family
- Intel® Xeon® Processor Family
- Intel® Xeon® Scalable Performance Processor Family

Apple M1* hardware is currently not supported

Windows Intel® Graphics Driver

To install the driver follow the directions in the article appropriate for your device:

- Intel® Iris® Xe MAX (DG1) and 10th-13th Gen Intel® Core™ Processor Graphics
 - <https://www.intel.com/content/www/us/en/download/19344/intel-graphics-windows-dch-drivers.html>
- Intel® Arc™ A-Series Graphics (DG2)
 - <https://www.intel.com/content/www/us/en/download/726609/intel-arc-graphics-windows-dch-driver.html>
- Intel® Data Center GPU Flex Series (ATS-M)
 - <https://registrationcenter.intel.com/en/products/subscription/956/>

Contact your OEM representative for access to the Intel Registration Center.

Linux General Purpose Intel GPUs (GPGPU) Driver

For all Intel GPUs, see this article, <https://dgpu-docs.intel.com/>, and follow the directions for your device.

Software Requirements

These OS distributions are tested by Intel or known to work; other distributions may or may not work and are not recommended. If you have questions, access the [Intel Community Forums](#) when you need assistance. If you have Commercial Support, create a support ticket.

Operating Systems:

- 64-bit Linux*: Ubuntu* 20.04, 22.04 (CPU & GPU)
- 64-bit Windows* Pro & Enterprise 10 (CPU & GPU), 11 (GPU only)
 - Using Microsoft's Windows Subsystem for Linux 2 (WSL2) in Windows 10, you can install the native Linux distribution of Intel oneAPI toolkits and libraries on Windows for CPU and GPU workflows. Details [here](#)
- Windows* Server 2019, 2022 (CPU & GPU)
- Red Hat Enterprise Linux 8, 9 (CPU & GPU)
- Fedora 36, 37 (CPU only)
- SUSE Linux Enterprise 15 SP3, 15 SP4 (CPU & GPU)

OS Deprecation Notice

The following OS support is now deprecated and will be discontinued with our 2025.0 release in Fall 2024.

CPU

- SUSE Linux Enterprise Server (SLES) version 15 SP3
- Ubuntu Linux version 20.04

GPU

- Red Hat Enterprise Linux (RHEL) version 8.6
- SUSE Linux Enterprise Server (SLES) version 15 SP3

External Dependencies

For **Windows***: None

For **Linux***: None

4 Installation

Installing this Release

The Intel® Distribution for Python* is compatible with the Conda* package management tool. All modules included in the distribution are initially installed into the root Conda* environment. A virtual environment is also created.

The following commands can be used to install the distribution from your command line:

```
# Linux installation (Interactive)
bash ~/intelpython3.sh

# Linux installation (CLI)
bash ~/intelpython3.sh -b -u -p ~/intelpython3 # (Linux CLI installation)

# Windows installation (Interactive)
intelpython3.exe

# Windows installation (CLI)
start /wait intelpython3.exe /S /RegisterPython=0 /D=%LOCALAPPDATA%\intelpython3
```

Documentation for installing can also be found in the following link:

<https://www.intel.com/content/www/us/en/developer/articles/technical/get-started-with-intel-distribution-for-python.html>

Changing, Updating, or Removing the Product

To update your python root environment, use the conda commands listed following the next paragraph. All releases, including updates, will create a *virtual environment* in `<installdir>/intelpython/releases/` containing all new release content.

Intel® Distribution for Python* removal: On **Windows*** or **Linux***: Delete the installation directory and remove additions to your PATH.

You can also use the Conda* package management tool to update individual modules. You can find the Conda* tool in the bin directory on Linux* or in the Scripts directory on Windows*. Use these commands to do the following with the Conda* tool:

- To install a new module: `conda install <module name>`
- To update an existing module: `conda update <module name>`
- To remove an existing module: `conda remove <module name>`

Optimization Notice

Intel's compilers may or may not optimize to the same degree for non-Intel microprocessors for optimizations that are not unique to Intel microprocessors. These optimizations include SSE2, SSE3, and SSSE3 instruction sets and other optimizations. Intel does not guarantee the availability, functionality, or effectiveness of any optimization on microprocessors not manufactured by Intel. Microprocessor-dependent optimizations in this product are intended for use with Intel microprocessors. Certain optimizations not specific to Intel microarchitecture are reserved for Intel microprocessors. Please refer to the applicable product User and Reference Guides for more information regarding the specific instruction sets covered by this notice.

Notice Revision #20110804
